Instruction to run the code:

1. The code.py file contains the code for the project. To execute this code on your system, you must have Opencv and all other dependencies installed on your system.

2. Copy the code.py file into a folder containing your images.

3. Create a new folder and name it as "saved_images" to store the annotated images.

4. Open a terminal and find the path to folder containing the images.

5. copy the path and paste it in the code.py file in the line my_path

6. repeat the above step for the save_path in the code.py file.

Run the code and a window must be displayed containing your image.
